DS400

DIESEL ADDITIVE GASOLINE AND BIODIESEL

THE PROFESSIONAL RANGE

LORRIES - CARS - MOTORBIKES - GO-KARTINGS

DESCRIPTION

DS400 is a treatment additive that improves the performance of gasoline, diesel and biodiesel fuels.

DS400 cleans the entire fuel system in a single application, including:

Injectors, inlet valves, collectors, injection pumps, exhaust valves, combustion chambers.

DS400 is comprised of a complex mix of molecules. DS400 was developed from chemical technology.

It complies with French inter-union specifications EN 590 and EN228.

ADVANTAGES

At the recommended dosage, DS400 significantly improves the performance of fuels used in automobiles, heavy-duty vehicles, farming equipment, civil engineering equipment and boating engines. DS400 has a positive impact on fuel properties, with the following advantages:

Reduces the surface tension of fuel resulting in better atomisation and more efficient combustion, giving rise to significant reduction in soot and fuel consumption and thus reduced operating costs.

- Significantly reduces noxious atmospheric emissions such as carbon monoxide, particles and smoke.
- Reduces friction thus improving lubrication and preventing wear and tear.
- Has a detergent effect that cleans engines and maintains circuits in a clean state.
- Eliminates condensation, is anti-corrosive, anti-rust and reduces the risk of bacterial contamination.
- Preserves the injection and valve circuit.
- Lubricates mechanical elements.
- Reduces fuel consumption.

For faster results, put the vial of DS400 in a can and mix with the fuel, then allow the injection system to take it in directly (for a technical check for example or for exceptionally dirty engines, the result will be instantaneous). Eliminates unstable deceleration, jerking, acceleration hops, difficult start-ups and carbon deposits.

Used for all engines, this unique formula is 100% efficient for cleaning injectors, valves and combustion chambers.

DS400 provides all the advantage of fuel system cleaner with the additional benefit of an "all in 1" formula. DS400 cleans aggressively to obtain the best results by eliminating stubborn deposits using its new and unique formula for professional use; its application is accessible to all.

INSTRUCTIONS

REMEDIAL MEASURES

Pour the contents of the vial into the tank, if possible before refill.

(add a 250ml vial per 50 to 60 litres fuel)

PREVENTIVE MEASURE

Put 50 to 100 ml for 50 to 60 litres of fuel.

Perfectly disperses water that can form due to condensation in tanks.

For diesel storage and domestic fuel oil tanks:

Add: A minimum of 1 litre of DS400 for 4,000 litres of stored fuel.

WARNINGS

For professional use.

Consult the SDS (on request only).

The information in our brochures, letters, reviews and reports is provided to advise you especially regarding testing that has been carried out, with an ongoing concern for objectivity and without any commitment on our part.

PACKAGING

Cardboard box 24 x 250 ml

Cardboard box 6 x 1 L

(dosing can)

Cardboard box 4 x 5 L

Barrel 30-60-210L
